institut

Zurich University
of Applied Sciences

Host: Lassalle-Institut, Zug/Zürich (CH)
Co-Organizers: Georgetown Environmental Justice Program, Washington DC (USA)
ZHAW sustainability, Zurich University of Applied Sciences, Zurich (CH)

Partners from the Global North: Munich School of Philosophy (D)
Centre for Development and environment, UniBern (CH)
Leuphana University of Lüneburg (D)
Environmental Sciences & Humanities Institute, Uni Fri (CH)
Laudato Si' Research Institute (USA)

Partners from the Global South: Universidad Iberoamericana (MEX)
Ecojesuits and grassroots (PHL)
Xavier Institute of Management (IND)

are pleased to invite to this
Pre-Conference

Making hope possible

On scaling up engaged scholarship for socio-ecological transformation
August 27-30, 2023, Switzerland

in order to prepare the

3rd International Transdisciplinary Biennial on Environmental Justice
Making hope possible
August, 2024, Switzerland

Yann Arthus-Bertrand, *La Terre vue du ciel* (Copyright YAB)

The International Transdisciplinary Biennial on Environmental Justice at Lassalle-Institute (Switzerland) offers an inter- and transdisciplinary platform for common activities (such as research exchange, communicative validation of results, networking, methodological innovations) between engaged scientists and reflective practitioners concerned by socio-ecological transformation.

The Biennial is aimed at scientific team leaders, senior and junior researchers, students, activists and decision-makers in industry, public administration and politics engaged in the topic and in transformation projects. As hosting organization operated by the worldwide Society of Jesus (religious order of the catholic church), Lassalle-Institute (Zug/Zürich) builds bridges between different spiritual traditions as well as between sciences, diverse fields of professional practice, business, and civil society since many years.

At the BIENNIAL IN 2024, the common work on environmental justice will focus in particular on the question of how hope can be made possible by action oriented transdisciplinary collaboration in view of aggravating crisis of climate change and biodiversity and of the need for decrease of global injustice.

At the PRE-CONFERENCE IN 2023, co-organizers and Partners invite institutions, decision-makers and scholars interested in further collaboration and partnership to prepare the Biennial as well as joint activities during the year such as open-access publications, transformation projects, mentorships, or groups for intervision.

To what we aspire

Nowadays, coming from approaches such as “engaged scholarship” (van de Ven 2007, Barge & Shockley-Zarabac 2008) and transdisciplinarity (Mittelstrass 2003, Hirsch Hadorn et al. 2008), discussions focus on concepts such as “transformative science” (Schneidewind & Singer-Brodowski 2014) and “Active Hope” (Macy & Johnstone 2012/2022). The Biennial in 2024 will be dedicated to the **investigation of such concepts** as well as of similar ones presented by participants. Main questions are:

- How far can “hope” be a **legitimate, intercultural and valid concept for transdisciplinary research and cross-border collaboration** on ecological transformation and decrease of injustice? What could it mean regarding scientific ethics, scientific-industry and scientific-politics collaboration?
- How are diverse disciplines such as economy, ecology, ethics, political and communication sciences, public management, governance studies etc. identify, argue and explain the **evidence of optimistic perspectives**? How do they deal with the **evidence for pessimism**?
- How could “active hope” be modeled further as a “practice” (Macy & Johnstone 2012/2022, p. 4) and thus how can we “tackle the mess we’re in” (ibid.) in **diverse fields of transdisciplinary work** such as (natural, social, technical) scientific research, policy planning and implementation, as well as public and community communications?

Our approach is resolutely transdisciplinary and transformative and open to the questions arising from policy fields, international organizations, internationally networked companies and democratic movements. We welcome not only presentations that allow us to envisage a way out of a catastrophic acceleration of global warming but also the means to fight against the erosion of biodiversity, the rarefaction of water and critical minerals and the collapse of public spheres. Concrete initiatives taken on the field in terms of agro-forestry, permaculture, agricultural cooperatives, circular societies, network communication, civic participation etc. as well as the democratic revitalization of both environmental and urban commons are welcome.

Reply form

- No thanks**, I'm not interested at the moment, but please stay in contact with me for future activities.
- Yes, I'm interested** in taking part of the Biennial in 2024. Therefore, I'm offering a commitment as follows:
- co-organizer** (co-organization of the Pre-Conference in 2023; attendance at the Pre-Conference in 2023 at one's own travel expense; scouting and recruiting KeyNotes and speakers for die Biennial in 2024; chairing panels and/or topical sessions at the Biennial in 2024, invitation to contribute to joint open-access publications)
 - associate partner** (attendance at the Pre-Conference in 2023; proposals of speakers for the Biennial in 2024 or organizing an own panel; invitation to contribute to joint open-access publications)
 - correspondent partner** (online-Meeting during the Pre-Conference in 2023; proposals of speakers for the Biennial in 2024; invitation to contribute to joint open-access publications)
